Biodegradation Process:

What it is:

Our Eco Best Technology® (EBT) is the breakthrough innovation that makes our gloves fully biodegradable, sustainable and the first of their kind.

How it Works:

When disposed, microorganisms consume, metabolize and break down EBT materials into three natural compounds—organic soil, methane and carbon dioxide. This creates fertilizer, leaving zero waste behind.

Where it Goes:

Since EBT requires microbial activity for biodegradation, gloves with EBT cannot biodegrade or even begin to biodegrade prior to disposal. These abilities have been validated by independent certified laboratories using ASTM International test methods (ASTM D5526 & ASTM D5511).

How it Performs:

Gloves containing EBT perform exactly the same as SHOWA's non-EBT gloves, as proven by third party testing in side-by-side performance evaluations. Protection and performance remain our top priorities—we've simply created a smarter, more sustainable way to provide it.

Why it's Important:

Consider the number of disposable gloves used every day in hospitals, offices, schools, warehouses, labs and even our own homes. The numbers are astronomical. **With EBT, we help preserve the planet by accelerating each glove's biodegradation process by up to 100 years*.** And every glove makes a difference.

* actual time may vary depending on climate and location of disposal.
